Product Specification Sheet

Product Name	Stemolecule™ SB431542
Description	SB431542 is an inhibitor of the transforming growth factor-beta 1 (TGF-β1) activin receptor-like kinases (ALKs). It is a selective and potent inhibitor of ALK-4, -5 and -7. SB431542 inhibits endogenous activin and TGF-β signaling without affecting more divergent bone morphogenetic protein (BMP) signaling utilizing ALK-1, -2, -3, and -6[1,2]. SB431542 stimulates proliferation, differentiation, and sheet formation of endothelial cells derived from embryonic stem cells[3].
Catalog Number	04-0010-10
Size	10 mg
Alternate Name	4-[4-(1,3-benzodioxol-5-yl)-5-pyridin-2-yl-1H-imidazol-2-yl]benzamide
Chemical Formula	$C_{22}H_{16}N_4O_3$
Structure	Molecular Weight	384.4
CAS Number	301836-41-9 (anhydrous)
Purity	Greater than 98% by HPLC analysis
Formulation	White solid
Solubility	For a 10 mM concentrated stock solution of SB431542, reconstitute the compound by adding 2.6 ml of DMSO to the entire contents of the vial. If precipitate is observed, warm the solution to 37°C for 2 to 5 minutes. For cell culture, the media should be prewarmed prior to adding the reconstituted compound. Note: for most cells, the maximum tolerance to DMSO is greater than 0.5%. This molecule is soluble in DMSO at 100 mM.
Storage and Stability	Store powder at 4°C protected from light. Following reconstitution, store aliquots at -20°C. Stock solutions are stable for 6 months when stored as directed.
Quality Control	The purity of SB431542 was determined by HPLC analysis. The accurate mass was determined by mass spectrometry. Cellular toxicity of SB431542 was tested on mouse embryonic stem cells.
